## **Football/Soccer Substitution Board**

We all build projects, we never think if those projects will be used in real life or not. But this time Victor (ugoo5000) Brings a very simple but very useful idea to the table that can become reality to anyone, who needs it. If you're a Football/soccer fan and you have a home team, Then this is a must do project for you.

This project is a really simple Football/Soccer substitution board used on field. As seen from the picture above its a very professional looking substitution board. Board has two color LED display each counts from 00 to 99 with Red and Green color display. Using this board is really simple, Just select number and show it as simple as that.

Project code is written in assembly language very easy to understand, No complex glue logic. You can ask your doubts on forum if you have any. Our Admins, moderators are always available on forum to answer you. So go ahead and make this enjoyable project at home or for your school.

Download this project from here:
